

12 September

Hello Makara ADU team,

You already have the strategy, the four tracks, the entry and exit logic, and the copy. The real risk is building on top of a Hubspot instance whose current state is partly unknown.

My plain opinion: the paid audit is the right first milestone. With 7,200 contacts, custom Vercel forms, Buildertrend in the stack, and API-based HubSpot connections, guessing would create more cleanup later.

The page below covers how I would audit it, build the workflows, handle SMS, and leave Makara with documentation your team can maintain.

Allen
