Hello FundyOps team,

You need a Make.com scenario that can take invoice PDFs or images from email or Drive, extract the right fields, reconcile the math, and stage the result in QuickBooks Online without posting it.

The risky part is not the trigger. It is keeping duplicate invoices, malformed AI output, QBO tax handling, and bad scans from breaking the workflow or creating accounting cleanup.

The short plan below shows how I would build the draft-only approval path, JSON validation, error handling, QBO attachment step, logging, and handoff.

Allen
