12 October

Hi Rosie,

Use one anonymized performance screenshot as the interview test, but don't score the screenshot first.

Ask the candidate to explain the tracked event, campaign structure, retargeting audience, Pixel or CAPI check, and the next budget decision they would make from that result. That matches your requirement for actual metrics plus strategic reasoning.

For WhatSnap and iSnap, I'd trust the person who can connect the result to signal quality and buyer intent. Tool names are easy. Repeatable judgment is the harder hire.

Allen
