Hello EverKind Senior team,

You are not asking for simple Google Ads management, and you are not asking for custom software. The hard part is connecting Google Search, tracking, intake, HighLevel, follow-up, and placement reporting without turning it into a messy build.

I think the intake-first process is the right constraint. For senior living and memory care searches in Phoenix, the system should optimize toward qualified consultations and completed placements, not cheap clicks or random calls.

The short plan below shows how I would structure the campaign, CRM pipeline, automation, tracking, pricing, and fit check.

Allen
