Hi Charles,

REAL ESTATE GHL

Because you're not starting from scratch, I'd test the live intake before changing the structure.

I'd submit one test lead through each CharlesWhitfieldRealtor.com path: form, property inquiry, home valuation, IDX lead, and appointment request. For each one, I'd check the source, tag, pipeline stage, assigned owner, first message, ISA task, notification, and next follow-up.

That gives you a clean decision rule: rebuild anything that breaks the handoff, and leave anything that already moves the lead clearly.

Allen
