4 November

Hi Lorenzo,

Before building the guest agent, I'd test WhatsApp coexistence with the Business app by sending a test enquiry through each and checking that both show the conversation. That could catch a setup issue early, before it affects replies to tour guests.

I'd also trace one test booking through Bokun to Stripe, then check that its driver dispatch button and cash entry are recorded as intended. That follows the handoffs in your four-part setup and can show where the flow needs adjustment before rollout.

Allen
